### B780

#### GREAT Things Come in Small Packages:

- Low cost with smallest hybrid footprint
- FAST monochrome or ColorPOS® two-color thermal receipt
- Drop validation impact print station with superior paper handling
- Built-in MICR reader
- Imaging module option available
- Multiple communication interfaces

#### The Next Evolution in Teller Validation/Receipt Printers

From the company that brought you the first thermal/impact hybrid transaction printer with integrated MICR, and clam shell drop-in paper loading design. TPG announces another first -- the model B780 offers the market the first fully featured two-color/monochrome hybrid printer with a footprint under 73 sq. in.

#### Performance in a Small Package!

TPG's B780 printer has been designed for maximum flexibility, performance, reliability, and lowest cost. It opens a new world of possibilities with its lightning fast (200 mm/s) thermal receipt station. The B780 printer is capable of printing watermarks, logos, coupons and other "attention grabbing" features on monochrome or two-color thermal paper. Using TPG's innovative and industry leading ColorPOS® technology and ReceiptWare™ Receipt Marketing Software, the B780 is sure to deliver your message every time.

#### Premier Technology

Still need to print on forms and validate checks? The B780 impact slip station allows drop-in validation with top, front or side insertion of checks or other forms. It also reads MICR information from checks, general ledger tickets and other documents. But it doesn't end there. The B780 offers a paper low indicator and exhaust sensor, a positive slip position sensor and indicator, multiple resident emulations, and it is available with several popular communications interfaces, including USB. The B780's ribbon cassette has been designed for a snap-on/snap-off, "clean fingers" installation and can be used with any new or recycled bond paper.

#### Simply Reliable

No preventative maintenance is required during regular work cycles. The B780's industry leading design is backed by a 2 year warranty.

#### Imaging Capability

TPG's B780 two-color/monochrome hybrid thermal/impact receipt printer is designed with imaging in mind. The innovative imaging module is designed as an upgrade kit. You can add imaging capability anytime you'd like. This imaging module is field upgradable (the printer does not need to be shipped out for an upgrade) by a certified technician.

#### Check 21 Compliant

- One pass scans both sides of the check
- Archives check images in printer memory
- Optimized to handle wrinkled and folded checks

#### Scans laminated ID cards

TPG's B780 Hybrid printer has an upgradable Imaging Module option. The Imaging Module allows you to scan checks and ID's right at the point-of-sale. The option can be purchased as a field upgrade or as a standard option.

#### Multiple Communications Interfaces:

Serial, USB, and Ethernet.

#### Harsh Environment

With the Harsh Environment kit, you can expect the same technical specifications as the standard printer. The only difference -- the printer is ready for your harsh conditions.

## Imaging Module

[A722](#)

### Truly Field Upgradable Imaging Module

[A758](#)

### Designed to Evolve

[A760](#)

TPG's new Check Imaging Kit was engineered to be modular, capable of seamlessly retrofitting the A776/B780 printer to support digital check imaging. The Kit's future-proofed design provides the insurance you need when choosing a POS printer and are unsure about check imaging at the POS.

[A776](#)
[A794](#)

### Ease of upgrade

Complimenting its smart modular design, TPG's Imaging Kit is the only system on the market that can upgrade a standard POS printer to support imaging in under 15 minutes. Unlike other solutions, TPG's Kit is truly field-upgradable and does not require a complete teardown of the unit. Simple and cost effective.

### Flexible media imaging

Regardless of whether you want to scan rigid items such as ID cards or supple media like checks, TPG's Imaging Module features multiple media paths to suit your needs. The unit's top insertion option offers dual sided imaging of stiff media and checks, while the unit's slip table insertion option features double sided check imaging with MICR reader.

### Keeping your options open

If you are unsure about imaging checks at the POS, know that TPG has a solution designed to grow with your needs.

### Technical Specifications

Type: CIS (Contact Image Scanner)  
 Resolution: 203 dpi  
 Single-pass scanning: Two-sided  
 Mode: 256 level grayscale, black and white  
 Speed: 7.5 inches/second (190 mm/sec)  
 Data transmission format: CCITT Group 4, TIFF, Raw  
 Memory for scanning: 8 MB RAM  
 Scanning area: Width max 4 inches (100 mm),  
 Length max 11.25 inches (285 mm)  
 Weight: Imaging Module Only 2lbs. (0.91 kg)  
 Dimensions (W X D X H): Module  
 With Printer – 6.5 in. X 13.25 in. X 6.65 in.  
 (165.10 mm X 336.55 mm X 168.91 mm)  
 Without Printer – 6.5 in. X 5.74 in. X 4.4 in.  
 (165.10 mm X 145.79 mm X 111.76 mm)
